Communication: Developed training materials and documented training of soldiers. Developed Standard Operating Procedures for new services.

Leadership: Exercise operational control over subordinates while providing mentorship and individual development. Developed and delivered instruction to over 500 Soldiers.

EXPERIENCE

Coding Dojo, Online Bootcamp

Through all the projects I found that the most difficult part was figuring out where to start the project. Once past that, it was checking off the boxes of what each individual assignment asked for. One of the more difficult projects was the Wall. It brought together all of the concepts that had been taught in Python up to that point, and combined them into one encompassing project.

- *Internet* – an assignment to test HTML/CSS concepts. Taking a image and reproducing the static page from scratch.
- *Login/Registration* – Building a function login/registration application which includes validations and error messaging.
- *Bcrypt* – learning the importance of encrypting database information using the most effective means possible. The scalabilty of Bcrypt means it can become more complex as computers get faster.
- *The Wall* – a message board where users can post messages and see messages by other users. This assignment incorporated the login/registration app to make a fully functional website.

CODING DOJO – ONLINE- HTML/CSS, PYTHON

Online Bootcamp to learn Web/Software Development. Courses included HTML/CSS, JavaScript, and Python. Certifications include Orange Belt in HTML/CSS and Red Belt in Python.

NORTHWEST UNIVERSITY – KIRLAND, WA – BA: HISTORY
